Lab4

BOM

1. Window Object

1.1. Create a parent window that opens a flying child window. Hint:
Start by creating a parent window that opens a child window.
Child window should always be on top view and moves up and down within boundaries of user screen.
Parent window should contain a button that stops child window movement.

1.2. Write a script that shows a "typing message" appearing in a new child window. The new window should close after few seconds of displaying your message.

1.3. Create a parent a window that opens a scrollable advertising child window.

2. Location Object & Navigator Object

2.1. Make your own welcoming page of a registration form to
- **display a greeting message for the user by his name and title, then**
- **show a display of his info (address, gender, email, mobile) and**
- **display a recommendation to use chrome browser if he is using another browser (Bonus)**

Hints:
- **You should build a registration form to send the entire required info from the user and let the action is getting the welcoming page.**

i.e. The welcoming page is the page that should be displayed after registration.

- **The registration form should contain fields for name, email, password, job title, mobile, gender, and address.**
- **Read the required info from the query string.**
